Professional Summary

Full-Stack Software Developer and Co-Founder with a strong focus on high-availability architectures, FinTech software engineering, and AI-driven automation. Experienced in building robust, scalable multi-tenant SaaS systems from scratch, optimizing relational database performance, and writing clean, defensive code. Proven ability to architect complex backend business logic while maintaining polished, modern user interfaces.

Technical Skills

- **Backend & Core:** Node.js (Express 5), Python (Django), Go, REST APIs, Microservices, Financial/Billing Logic.
- **Persistence & Cloud:** Supabase, PostgreSQL (Advanced Schema Design, Check Constraints, Database Triggers), AWS Textract.
- **Frontend & UX:** React, JavaScript, Zustand, Tailwind CSS v4, Shaden/UI, HTML5/CSS3.
- **DevOps, QA & Tools:** Linux (Bash/Zsh), Docker, Git, GitHub, Jest, Supertest, Render.

Professional Experience

Efisco <i>Co-Founder & Lead Full-Stack Developer</i>	Cali, Colombia (Remote) Apr 2026 – Present
--	---

- Architected the entire core technical infrastructure, multi-tenant isolation, and security protocols for a high-performance B2B SaaS platform in the automotive sector.
- Engineered an optimized physical relational schema using **Supabase (PostgreSQL)** with explicit check constraints and database triggers to ensure rigorous inventory isolation per client.
- Built a financial and tax calculation engine (*financialEngine.js*) managing real-time calculations for complex tax models (IVA 19%, ReteIVA, ReteFuente, ReteICA) and tracking net liquidity against fiscal liabilities.
- Integrated **AWS Textract** to build an intelligent OCR invoice scanning system for supplier management, automating data extraction (NIT, totals) and directly syncing records into the master accounting ledger (PUC).
- Developed payment gateway integration pipelines factoring in physical and online processing fee scales (Bold, Addi) to accurately calculate and surface net platform commission breakdowns.
- Implemented a highly resilient sanitization middleware and asynchronous webhook handling system for the **WhatsApp Business Cloud API**, mitigating Meta's 24-hour message window limitations.
- Established a defensive coding culture by developing automated end-to-end financial validation suites utilizing **Jest** and **Supertest**.

Key Projects

Efisco Architecture | *React, Express, Supabase, Tailwind, AWS Textract, Meta API*
Repository: github.com/brandonjimenez21/efiscoArchitecture

- Designed and implemented the full-stack foundation of the Efisco SaaS platform, covering multi-tenant schema isolation, fiscal engine logic, and a responsive React frontend.
- Structured the codebase with scalability in mind, applying modular service layers and automated test coverage across critical financial workflows.

Clima CLI | *Go, Wails Framework, OpenWeather API*
Repository: github.com/brandonjimenez21/Clima-CLI

- Built and shipped a lightweight native desktop weather monitoring application using Go and the Wails framework.
- Integrated real-time external APIs and created a fast, clean local user interface optimized for speed and simplicity.

AI Market Agent | *Go, Python, AI Automation*
Repository: github.com/brandonjimenez21/ai-market-agent

- Developed an AI-powered market agent combining Go and Python to automate data gathering, analysis, and decision-making workflows.

- Designed the agent pipeline to be extensible, supporting integration with external APIs and configurable automation triggers.

Colombia Travel | *React, Next.js, Node.js*
Repository: github.com/brandonjimenez21/colombia-travel

- Built a full-stack travel guide web application for Colombia, leveraging Next.js for server-side rendering and optimized page performance.
- Implemented dynamic content routing, responsive UI layouts, and a Node.js backend to serve location-based data efficiently.

Portfolio & Deployment Platform | *React, Tailwind CSS, Vercel*

- Built and deployed a tailored web platform on Vercel, integrating responsive layouts and performance optimization practices.

Education

Universidad del Valle	Cali, Colombia
<i>Software Development Technology Program (Tecnología en Desarrollo de Software)</i>	Expected Dec 2026

- Completed 7 semesters of core computer science coursework, including advanced databases, systems analysis, and data structures.

Languages

- **Spanish:** Native
- **English:** Professional Working Proficiency
